

# Site access changes at Springfield

## Road closure

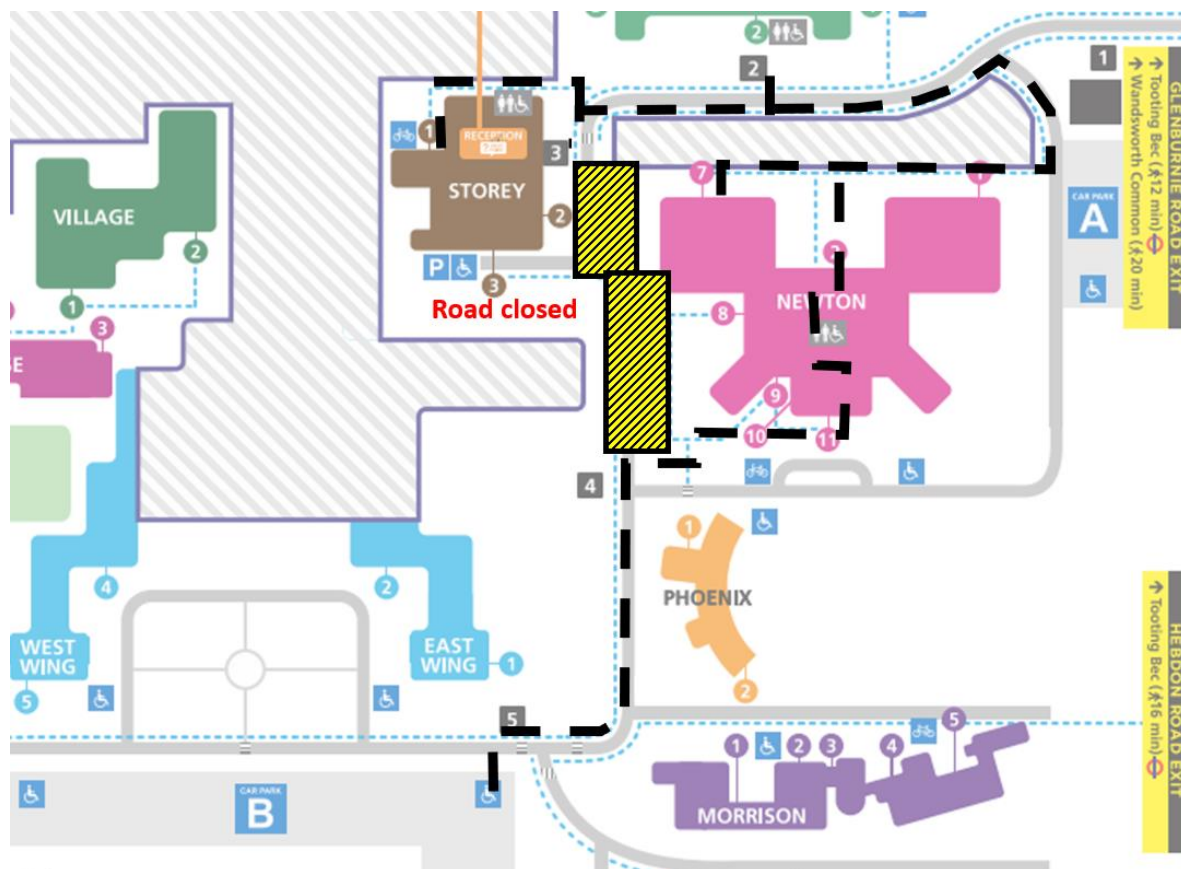

As you may be aware, construction has been taking place on sections of Springfield Drive between Storey Building and Elizabeth Newton Building at Springfield University Hospital.

This is due to continue as works move on to new sections of the road, commencing Monday 5 April 2021.

Existing hoardings outside of Storey Building will be removed where works have been completed and a new section of the road will be closed and hoardings erected, as indicated by the black and yellow striped rectangles in the diagram below.

Works on this section of road are anticipated to be complete by August 2021 and further updates on site access will be provided in the run up as appropriate.

*Diagram 1 – Progression of road closure between Storey and Newton Buildings and new access routes (black dotted line)*

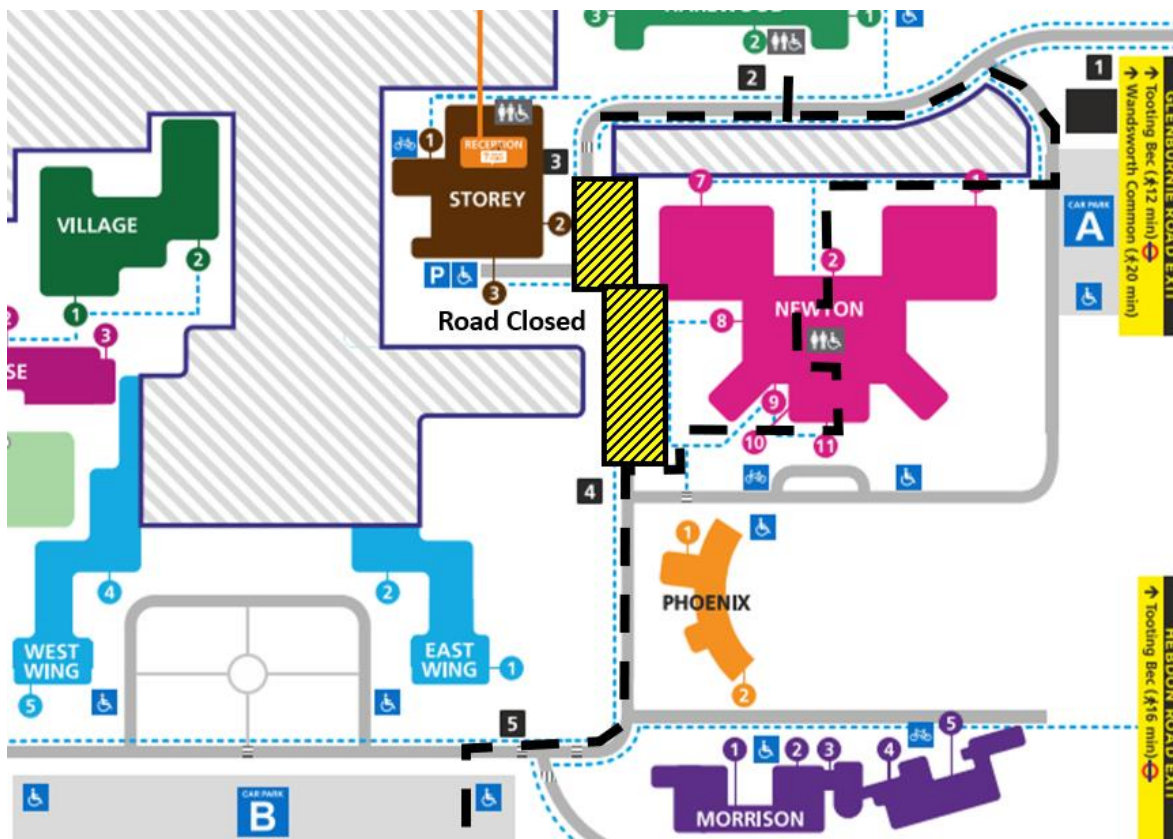

### Access via Elizabeth Newton Building

During this period, there will no longer be access to Storey Building via the Storey Building car park (entrance 3 above) and access via the junction next to Phoenix to Storey's main entrance, 136 Ward, Newton Building Entrance 7 and Harewood House will no longer be available to staff, ambulances, patients and service users and members of the public.

For pedestrians, access will instead be diverted through Elizabeth Newton Building (see diagram two below), as is currently a temporary access route through the site.

## Ambulance access

Ambulance access to Storey and 136 Ward will now come from the Glenburnie Road entrance via Harewood House as shown below.

*Diagram 3 - Ambulance Movement To/From 136 Ward To/From Glenburnie Rd*

As construction works progress on site as part of the Trust's Estate Modernisation Programme (EMP) we continue to liaise with staff, patients and service users and our community partners to help manage and minimise disruption wherever possible.

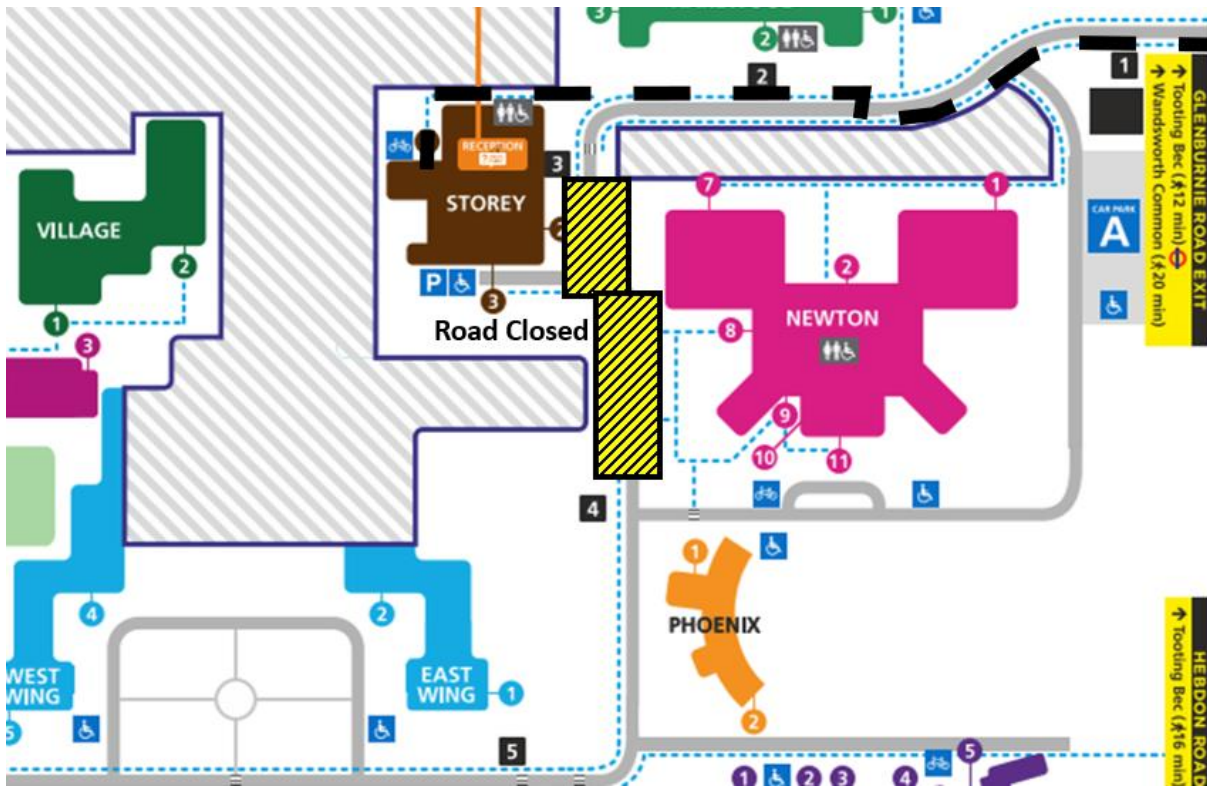

Per [our update](#) in November:

- Car Park A remains closed to support health and safety management. Car Park B open as usual
- The pedestrian route through Elizabeth Newton Building remains in place as do one-way vehicular diversions around the building, supported by traffic lights.

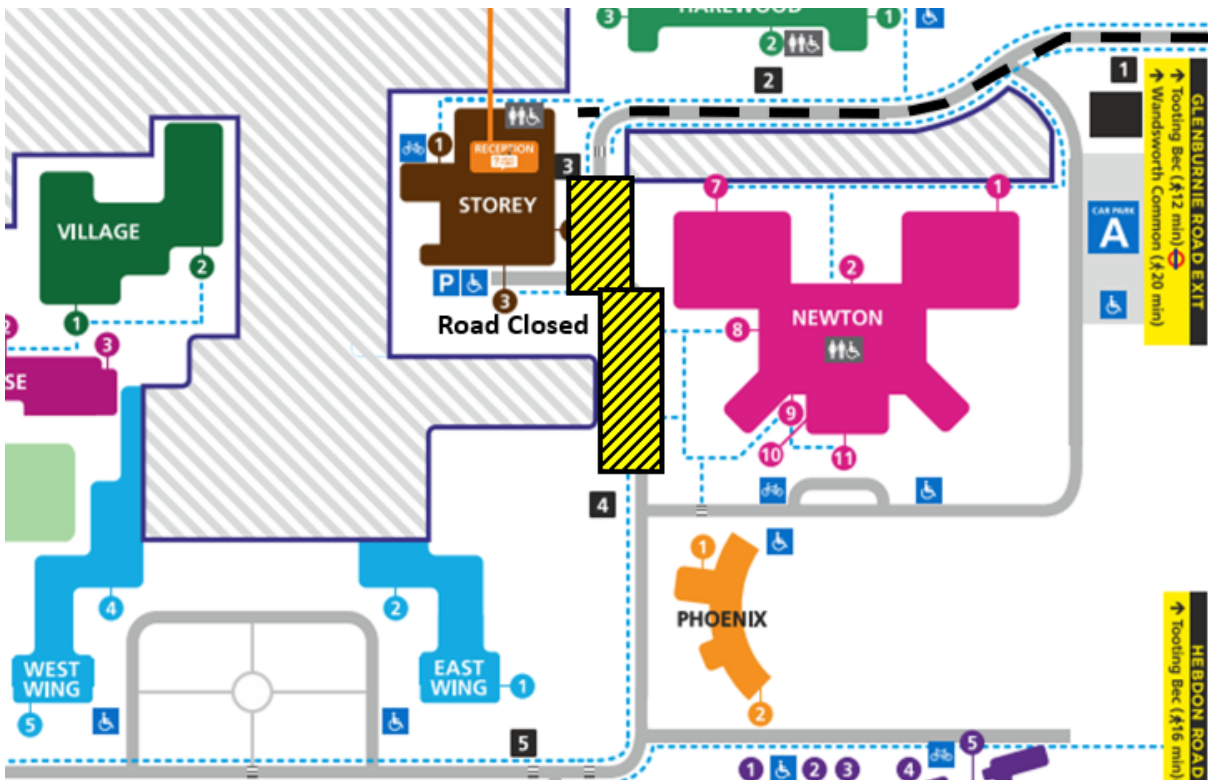

Please find below a series of maps showing the access routes, all of which are clearly signposted.
